The Pulsors

Picture: (Qty. 2) ENHP+ Enhanced Pulsors

Wire leads: ENHP+ (4 Inch Brown 22 AWM)
HPP+ (4 Inch White 22 AWM)

Average 1000 Ohms +/- 30%

ENHP+ (Pkg. 1 Enhanced Pulsor) **ENHP6+** (Pkg. 6 Enhanced Pulsors) **ENHP12+** (Pkg. 12 Enhanced Pulsors)
HPP+ (Pkg. 1 High Performance Pulsor) **HPP6+** (Pkg. 6 High Performance Pulsors) **HPP12+** (Pkg. 12 High Performance Pulsors)

The Pulsor is the most stable and versatile motion detector available anywhere. The Pulsor is completely invisible because it is epoxied to the bottom edge of the support joist where it can not be seen. It is effective on both steel and wooden structures. Environmentally sealed and utilizing 22-gauge marine grade wire leads, Pulsors are ideal for both indoor and outdoor applications. They will not respond to vibration, shock, snow loads, building settling, airborne items or environmental conditions (Including pets up to sixty pounds). They sense only the unique flexing of the floor caused by a person's movement. Sensitivity of the Pulsor is fully adjustable from the processor. Year after year, indoors and outdoors, the Pulsor will outperform any other motion detector.

Security

The Pulsor is used indoors and outdoors for security and early-warning applications. The Pulsor is the ideal solution for residential systems with pets up to sixty pounds (60 lbs.), as well as applications without pets. Roofs of commercial buildings are also excellent locations for the Pulsor. Though residential and commercial buildings are the most common applications, Pulsors are used for security in many other areas.

- * Steel Fire Escapes
- * Cockpits of Airplanes
- * Chain Link Fence Posts
- * Display Platforms in Museums
- * Steel Catwalks in Open Pit Mining Operations
- * Roller-Coaster Frames to Initiate Automated Sequences
- * Tractor Trailer Beds to Detect Unauthorized Entry
- * Under Window Sills

Home Automation

The Home Automation industry uses Pulsors for activation of different utilities based upon where a person may be standing. Light activation is the most common application.

- * Top and Bottom of Stairs
- * In Front of Closet Doors
- * Water Activation in Showers
- * Camera/VCR Activation
- * His and Her Sides of the Bed (for low level night lighting)
- * Outdoor Decks for Lighting and Annunciation
- * Fan Activation in Restrooms
- * Activation of Heating/Cooling Systems

Marine

People are becoming more security conscious about their boats and docking areas. Interest in marine applications should be directed to www.marineguard.net.

- * Docking areas and Walkways
- * Personal Pleasure Crafts
- * Yachts (120+ feet)
