The WP4 Battery Operated Vehicle Detection Systems

Overview

The WP4 series Battery Operated Probe Systems are ideal for locations where trenching is undesirable or impractical. These systems are designed to send the alarm signals to a building via transmitter rather than a hardwired cable run. The complete package is simple enough to be installed by almost anyone. Complete systems include everything needed for installation from the batteries outside to the sounder inside. All complete systems use only the highest quality transmitters and receivers.

WP4C (Complete Short Range System)

Features

- * Increases profit by minimizing installation time and manpower
- * High resistance to lightning and environmental conditions
- * Covers driveways up to 14 ft. wide (Beside driveway)
28 ft.wide (Center of driveway)
- * Non-discriminatory to inbound / outbound traffic
- * All systems include Probe with a 25 foot lead
- * Ability to add a second probe (any P500 Series Basic Probe)
- * Responds only to moving ferrous metal
- * RF resistance up to 1000 MHZ
- * Avg. Battery life: 12-18 Months
- * Remote sounders

WP4B (Basic - Wireless equipment *not* included)

WP4C (Complete Single Entrance Short Range)

WP4CLR (Complete Single Entrance Long Range)

WP4CDE (Complete Dual Entrance Short Range)

WP4CDELRL (Complete Dual Entrance Long Range)

Short Range Systems = 2000 feet : Long Range Systems = 5000 feet
